1. Which one of the following is an advantage of Network File System (NFS)?
   a. **Portability**
   b. Consistency
   c. Scalability
   d. None of the above

2. A simple distributed file system cannot have a "thin" client because going over the network is slower than going to local memory.
   False

3. Which of the following contributes to the **additional** overhead of a DFS over conventional file systems?
   a. **The time to get the response across the network back to the client**
   b. **The time to deliver the request to the server**
   c. Storage access time
   d. CPU processing time

4. What are the disadvantages of Napster?
   a. **Scalability**
   b. **Robustness**
   c. Dynamicity
   d. Simplicity

5. What is the main advantage of Skype over Napster?
   There is no centralized indexing server to cause a bottleneck
